

Specification

Product:	Ef
Type of substance:	Erosion protective fibres made of cellulose
Form:	Dried fibres
Analysis:	Cellulose fibres without any chemical additions
Effect:	In connection with hydroseedings and fixations Ef improves the effectiveness of soil stabilizers (for instance TERRAVEST K). The water storage capacity of the upper soil layers is improved. When adding the fibres to the grassing mixture of the Hydroseed system, a homogeneous distribution is achieved as well as a good interlacing with the soil surface.
Field of application:	Grassing of virgin soils with the hydroseeding method Hydroseeding grassings of slopes Protection against wind erosion
